

Practical Task 1

I am currently entering an exciting, new and promising Tech World! Taking a place in Skills Bootcamp in Software Engineering has helped me to surpass my limits. Studying in boot camp has taught me how to independently research for information, dedicate time and meet deadlines. It has taught fundamentals of vastly used python program, such as data analysing and software testing. During my journey I have encountered multiple challenges and projects. Such as real-world simulation projects, problem solving challenges and software testing and quality assurance. My prior experience in an admin role where I was able to use internal softwares and work closely with the tech team provided me a chance to get a grasp of what it takes to build, review and fix the software! I am looking to become a junior software engineer where I can build code and libraries for future use taking into consideration availability, security and data integrity, develop new user interfaces and complete day to day operations of systems. My problem solving and attention to detail skills help me to fit an excellent candidate who is willing to learn and promote new ideas. The latest research shows that the demand for tech products and services over the past two years has led to a surge in tech job opportunities in the UK, reaching a 10-year high. Educational platforms such as bootcamps are providing students with knowledge, commitment and encouragement to go and fill in the demand we currently experience. I am committed to leveraging my skills and knowledge gained through the bootcamp to make a meaningful impact in the tech landscape!

Practical Task 2

Junior Software Developer
